

# BEAKER & WRENCH

The Outlet Pump by Beaker & Wrench turns what was once a variable into a control. It's time to enhance your output while saving on production time! The Outlet Pump (also known as a Gear, Dosing, or Discharge Pump) allows the operator to have complete control over your system's flow rates. Attaching the Outlet Pump to your short path or wiped film evaporator means there is no longer a need to break deep vacuum to swap flasks. It also means you can distill as slow or as fast as needed. The gears within the Outlet Pump create a suction and pull oil towards the outlet's check valve, while a UL recognized heat pad delivers powerful temperature control giving the operator a consistent distribution of oil.

## Product Specifications

- Weight: 17 lb
- Voltage :120V
- Power (W): 45W
- Temperature Range: 50C (Max) , 0-70% Relative Humidity
- Plug: Type A with Ground
- Current (A): 5A
- Max Pump Speed (rpm): 6.25
- Max Vacuum: 1 Torr (alone)
- Mounting Orientation: Horizontal (Recommended)
- Vacuum: Holds High Vacuum w/ Vacuum Pump
